

Employees' State Insurance Corporation (ESIC)

A Gaea Solution Review

State Insurance Corporation Deploys P6 and Additional EPPM Solutions to Maximize Efficiency.

About ESIC

Created in India in 1952, Employees' State Insurance Corporation (ESIC) is a union government organization whose property management division (PMD) manages large-scale construction projects for building medical colleges and hospitals.

The Challenge

ESIC wanted to create an efficient workflow in order to achieve faster internal approvals, fewer paper-based processes, and the easy visibility of records and data. ESIC partnered with Gaea to review their current processes and develop an effective estimation and billing system, and processes that could handle a large number of concurrent projects in order to reduce performance risk, maximize efficiency, and increase end-to-end visibility.

The Solution

Gaea designed, configured, and deployed Gaea Estimator, Oracle Primavera P6, PCM, Gaea Status Tracker and PMO dashboards, and integrated everything with ESIC's proprietary ERP system. ESIC now has a paperless estimation and approval process. Gaea clearly defined roles and responsibilities aligned with standard operating procedures for maximum efficiency.

The new estimation and approval process is exponentially more efficient than the previous, paper-based system. ESIC's new project management process built and implemented by Gaea uses best practices for total visibility across projects and stakeholders. ESIC can also now control contractor billing based on project progress, and control material delivery. ESIC is able to provide periodic financial draw-down schedules based on project performance, allowing the finance department to plan their cash flow accordingly.
