

SOLUTION REVIEW: VIASAT

Leading Communications Company Deploys Oracle Mobile Supply Chain Applications for a Global, Scalable, Optimized Supply Chain Execution Solution

ABOUT VIASAT

Founded in 1986, Viasat is a global communications company with more than 4500 employees in 26 offices around the world. Viasat is best known for providing satellite broadband services and secure networking systems.

THE CHALLENGE

Viasat's existing warehouse management system was unable to scale to meet their quickly growing business demands. The system was lacking automated supply chain execution processes and real-time transaction visibility which made work inefficient and prone to errors. Viasat wanted a new solution that could address the previous challenges, include secure device communications, and ensure that proper SKUs shipped without holds or additional checks. The new solution also needed to work throughout the different Viasat facilities located around the world.

THE SOLUTION

Gaea deployed a Oracle Mobile Supply Chain Applications (MSCA), Mobile Transactions, Mobile Manufacturing, Project Manufacturing, and Label Integration. The solution enables real-time, barcode transactions for inbound, outbound, and warehousing operations. Secure mobile scanner guns, barcode scanners, receipts (PO, ASN, internal), shipping / quick ship, configurations, and label design and printing functionality were included. Gaea streamlined and automated Viasat business processes, and provided training, support, and solution enhancements, including extensions related to Oracle Procurement, and project manufacturing restrictions.
